ACLS (Advanced Cardiovascular Life Support) and BCLS (Basic Cardiac Life Support) training in PES Institute of Medical Sciences and Research

ACLS (Advanced Cardiovascular Life Support) and BCLS (Basic Cardiac Life Support) training are critical components of medical education in college. This emphasizes hands-on practice, scenario-based learning, and teamwork, ensuring that medical students are well-prepared to handle real-life emergencies both in and out of the hospital.

BCLS focuses on equipping students with fundamental skills to recognize and respond to cardiac emergencies, such as heart attacks or choking. It includes CPR (cardiopulmonary resuscitation), the use of automated external defibrillators (AEDs), and basic airway management techniques.

ACLS builds on BCLS, offering more advanced training for managing complex cardiovascular emergencies. It covers advanced airway management, interpretation of ECG rhythms, pharmacology, and protocols for treating conditions like arrhythmias and cardiac arrest.
