StudyTechnique: T1 & T2W images were taken in multiple orthogonal planes and correlated with FLAIR and DW images. Post contrast 10 ml gadolinium given intravenously & T1 FS sag, coronal & axial were taken.

StudyFindings:

Two GRE hypointense foci noted in left frontal lobe representing calcifications. No evidence of any white matter edema or contrast enhancement seen. Lateral and 3rd ventricles appear normal. Periventricular regions show normal signal intensity. 4th ventricle is also normal. Bilateral basal ganglia, internal and external capsules show normal signal intensity. Both the thalamic and caudate nucleus appear normal.

Highlight of the bullet points

1. View the patient details
2. Select the test name from the list.
3. Click on the show patient clinical details.
4. Select the reporting doctor from the list.
5. Click on the load template for the selected test.
6. Click to view previous RIS report,
7. Click to view the previous lab report.
8. Write/ Edit the report
9. Record the reporting date and time
10. Upload the scan report/image file/consent form.
11. Click to save the report.
